

Creo® GD&T Advisor Extension

Fast, Easy, and Accurate GD&T Creation

Geometric dimensioning and tolerancing (GD&T) is painstaking manual work, as anyone knows who has spent more time detailing a model than designing it. Worse, the very nature of this complex process means it is prone to error. With our partners at Sigmatrix, we've developed the Creo GD&T Advisor Extension to resolve these issues and put your focus back to where it should be – on your design.

Creo GD&T Advisor, provides both expert guidance on the application of GD&T and validation that it has been done correctly. When your model is complete, you can be confident that it complies with the relevant standard and is fully constrained.

Creo GD&T Advisor also improves your productivity when applying GD&T, reducing the number of mouse clicks and time required by up to 75%. The software simplifies the understanding of the complex GD&T standards by providing readily available guidance during every step of the application process. Rulesets included are ASME 14.5, ISO 1101 and their associated standard.

With Creo GD&T Advisor, you'll apply GD&T correctly the first time, saving money and reducing tedium.

Informative advisor messages guide and educate the user.

Key Benefits

- Increases productivity
- Reduces costs
- Provides consistency
- Eliminates mistakes due to human error
- Improves design communications, reducing the chance of misinterpreted or ambiguous information
- Enhances GD&T understanding

Functional feature-centric view of GD&T.

Capabilities and Specifications

Creation

- Efficient and intelligent application of functionally and syntactically correct GD&T for 3D part & assembly models

Validation

- Visual indications of syntactic errors and under-constrained geometry
- Detailed report about mismatched & unvalidated annotations and user control over required updates

Education

- Extensive help content, informative tool tips, and advisor messages aid in understanding of GD&T concepts

Utilization

- Intelligent, native Creo annotations are usable in downstream processes such as drawing production, tolerance analysis, computer aided inspection, and other design activities

Standards Rulesets

- ASME Y14.5-2009, 2018 and associated standards
- ISO 1101: 2012, 2017 and associated standards

The Creo Advantage

Creo is the 3D CAD solution that helps you accelerate product innovation so you can build better products faster. Easy-to-learn Creo seamlessly takes you from the earliest phases of product design to manufacturing and beyond. You can combine powerful, proven functionality with new technologies such as generative design, augmented reality, real-time simulation, additive manufacturing and the IoT, to iterate faster, reduce costs and improve product quality. The world of product development moves quickly, and only Creo delivers the transformative tools you need to build competitive advantage and gain market share.

Language support

English, French, German, Italian, Korean, Japanese, Russian, Spanish and Chinese (Simplified and Traditional).
